BRAINSTORMING

I. An interface is created with the intent to make the process of admission easier and less time-consuming for students.

II. The user will be able to enter the exam scores and additional scores of exams required for certain universities.

III. The details provided by the user will be forwarded to the backend.

IV. The algorithm takes the details provided as input and processes them.

V. The algorithm will now fetch the data from the predefined file which consists the list of universities

VI. Now the data will be processed by the Applied Data Science method.

VII. The ADS method will also train the model for better predictions

VIII. Now the data processed is transferred back to the frontend from the backend.
